- Dietetic treatment
- Cancer and Sports

Self-report

The Clinic of Oncology and Hematology focuses on oncology (treatment of tumors), hematology (treatment of diseases of the blood) and cancer immunotherapy. We treat clinical oncological and immunological issues with conventional, experimental and alternative forms of therapy:

- All forms of cancer of the various organ systems
- Benign and malignant diseases of the blood, the coagulation system and the lymphatic organs

Whether diagnosis, or treatment, or alleviating ancillary measures are involved, the whole person is what counts! The Krankenhaus Nordwest (Northwest Hospital) is a modern specialist hospital in Frankfurt am Main with ten clinics and three institutes. Patients with cancer diseases find with us outstanding conditions for diagnosis and treatment. From the pharmacy and the various surgical disciplines to radiation therapy, all necessary medical facilities are situated under one roof as an inter-disciplinary tumor center in the Northwest Hospital. In addition, we provide several pastoral and psycho-oncological facilities, which offer support in living with a serious disease.
